STANDARD FUNCTIONS TO ALL PROGRAMMES:

- To read and confirm the different parameters press: .
- To change the values pres:  , .
- To return to the work stage and quit programming, from anywhere : press the button for at least 3 seconds .

Operating functions in working stage

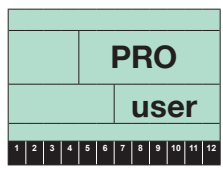

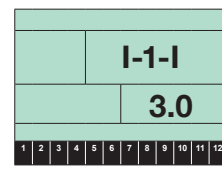

For density = 1.00
(water)

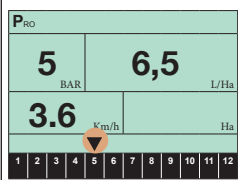

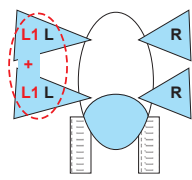

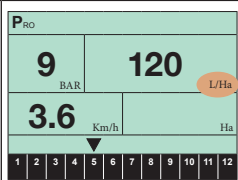

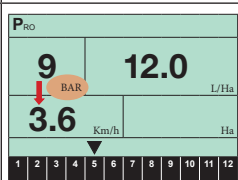

Special features displayed in working stage

<p>6 pre-defined memories of rows distance: selectable values without needing to stop the work</p>					
<p>Possibility of increasing or decreasing the required dosage</p>	<p>Easy way to quickly adjust the required dose temporarily: In automatic mode : press the button (or) , the required dose will increase (or decrease) by 10%; press the buttons and simultaneously to return to the stored required dose.</p>				
	<table border="1" style="width: 100%; border-collapse: collapse; text-align: center;"> <tr> <td style="width: 25%;"> </td> <td style="width: 25%;"> </td> <td style="width: 25%;"> </td> <td style="width: 25%;"> </td> </tr> </table>				
<p>Also in moving !</p>	<table border="1" style="width: 100%; border-collapse: collapse; text-align: center;"> <tr> <td style="width: 25%;"> </td> <td style="width: 25%;"> </td> <td style="width: 25%;"> </td> <td style="width: 25%;"> </td> </tr> </table>				
<p>Automatic switching off</p>	<p>The computer shuts down automatically if it does not work for 10 minutes (to economize the duration of the batteries) It is always better to move- with the equipment in a stationary position- the main switch down - OFF -</p>				

Operator parameters programming (= User Setup)

How to do	Action	Temporary reading	Final reading
Master switch OFF			

Parameters	Display	Description	Remarks
1. Memories from 1 to 12 Type-number and nozzles flow rates.		The arrow is flashing : press the buttons  and  to select one of the 12 memories. The values of these memories have been entered in the Manufacturer's Programme Page 5.	
2. Selection of the dose to deliver		The index L/Ha is flashing : press the buttons  and  to increase or decrease the value (L/ha).	
3. Speed index calculation : at which pressure?		The Bar index flashes : press the buttons  and  to increase or decrease the value. By keeping the required dose, it is possible to understand whether the working pressure is correct according to the speed that is indicated and calculated directly by the computer.	
4. Pressure index calculation : at which speed?		The Km/H index flashes : press the buttons  and  to increase or decrease the value. By keeping the required dose, it is possible to understand whether the forward speed is correct according to the pressure that is indicated and calculated directly by the computer, useful for the pump.	

Programming and selection of the row distance

1	2	3	4	5	6	7	8	9	10	11	12

To exit  one time

Remarks : there are 6 available memories, that are not visible unless activated with a value.

Visual alarms

Type	Display	Description	Displayed problem
Warning signal of the delivered dose		<p>In the event of a distribution control problem, the value or the index It/ha starts to flash. If the error does not exceed 10% , only the index It'ha is flashing. If, however it exceeds 10%, (for more than 6 seconds) the word "ERR" also appears.</p>	
Alarm pressure Pressure Transducer		<p>"ERR" starts to flash instead of the pressure value. This alarm is only active if the transducer is applied to the equipment.</p>	

Remark : In some circumstances, several alarms may appear at the same time
